

CAPTURE 100% OF YOUR RAIN WATER

RAIN-RETURN® PACKAGED RAIN HARVESTING SYSTEM

Shield yourself from escalating water costs and unpredictable rainfall by capturing every drop of rainwater that lands on your roof

Rain-Return is a cost-effective rainwater harvesting system that diverts all the water that lands on your roof into your storage tanks. Whereas typical domestic rainwater systems collect water from less than 10% of the roof area – meaning 90% of precious water goes down the drain – Rain-Return enables you to harvest **every single drop**.

Rain-Return is an easy-to-install pre-packaged system that has been designed and

manufactured in Australia. Once installed at the point where your stormwater drains converge, Rain-Return's patented and award-winning pump device intercepts and collects every drop of water and diverts it back into your tanks for you to reuse as you choose.

Rain-Return is the complete, self-sustaining rainwater harvesting system.
